

A prepublication assessment of

**Richard Jung:
Experience and Action: Selected Items in Systems Theory¹**

Richard Jung's mind and work has the quality of the classics of theological, philosophical and sociological thought. In the best of the traditions of Aristotle and Durkheim, the book starts with a notion of origin and causality that is essentially poetic, almost religious, to present us in the following chapters with a rigorous, rich and very suggestive phenomenological analysis of experience. The results are offered as a comprehensive systematic conceptualization of action in psychological and sociological systems analysis.
